Subject: Sep'22 Recognitions

Hi Rajani- PFB recognitions from my side.

1. ISM Svops Team: Yashwanth, Gulab and Likitha

90% of SL brands faced MOQ/FTL issues in supplying lower quantities and lead to non-fulfillment of replenishment POs. This, combined with the sales spike due to price reduction lead to 35% replen swoos% in Aug'22. Since onboarding of alternate options like enablement of ATS, SWA etc were a long pole, the ISM SVops team quickly onboarded brands on SPN (Service Provider Network) service which connects 3P logistics partners to the brand. ISM team onboarded 90% of the brands facing MOQ issues on SPN (8 out of 9 brands facing issues) in a span of 40 days, thus reducing Replen SWOOS% by 1100 bps (from 35% in Aug'22 to 24% in Sep'22).

2. ISM Svops: Yashwanth

SL USI% increased to 0.44% in Aug'22 exit (vs goal of 1%). Yashwanth started leading the USI (Unsellable Inventory management) portfolio. He set up weekly mechanism with FC to identify ASIN level causes of unsellable inventory. He identified 2 major reasons of USI- a) MRP tags missing in the products either via C-return route or during supply from vendors b) minor refurbishment pending with FC for the c-return products. He worked with all 13 vendors to supply separate MRP tags to FC for monthly correction of inventory. His findings also lead to modification of our Inbound and packaging vendor training deck to avoid "MRP tag misses" during vendor's packaging process. Due to his efforts, USI% decreased to 0.08% in WK 39 (sep'22 exit).

3. SL BA: Prema

Apparel is a variation category where each parent ASIN has color and size variation. A retailer carries multiple sizes across a style and tends to buy in size sets as per the product type (S,M,L or S,M,L,XL etc for Men's T-shirts; 28,30,32,34 or 30,32,34 etc for Men's Jeans). Currently, we sell in singles, giving option to customers to buy in singles or size sets. In Aug'22, we decided to measure only a "full size set" as a "relevant selection". Our catalog currently is based on B2C catalog structure which captures only a parent ASIN or a child ASIN. Prema automated the complex task of measuring and tracking "teen asins present in a full size set" in a span of 4 weeks. This helped us to track the right input metrics and gave us a scalable tracking solution as we launch new sub categories going forward.

Regards,
Neha Pathak
